OSHA 10 Hour Construction Industry

Why should you take this OSHA 10-Hour Construction Industry Course?

The OSHA 10-Hour Construction outreach training program trains construction workers on important topics of occupational safety and health hazards. Taught by Occupational Safety and Health Administration (OSHA) authorized trainers, this 10-hour training program provides instruction on OSHA standards and requirements as they apply to the construction industry and teaches safety awareness, which assists workers in recognizing and reducing the risks of the construction site and industrial hazards on the job site. This safety training outreach course is required by many Federal and State jurisdictions in order to work on construction and industrial sites. Participants will receive a course completion card after finishing the program.

This course is intended to provide an entry-level construction worker with a general awareness of recognizing and preventing hazards on a construction site. The training covers a variety of construction safety and health hazards that a worker may encounter on the job. OSHA recommends this training as an orientation to occupational health and safety. Workers must receive additional training on hazards specific to their work.

Training should emphasize hazard identification, avoidance, control, and prevention.

Participants will receive an official OSHA 10 Hour Hard Card
